

TEST REPORT

Applicant:	BRAYTRON S.R.L.			
Address of Applicant:	B.DUL IULIU MANIU, NR.616, CORP B, ETAJ 1 SECTOR 6,			
	061129, BUCHAREST, ROMANIA			
Equipment Under Test (B	EUT)			
Product Name:	LED OUTDOOR LIGHTING FIXTURE			
Brand Name:	Braytron			
Model No.:	Please Refer To Page 5.			
Applicable standards:	EN IEC 55015:2019+A11:2020			
	EN 61547:2009			
	EN IEC 61000-3-2:2019			
	EN 61000-3-3:2013+A1:2019			
Date of sample receipt:	April 25, 2021			
Date of Test:	April 25, 2021 To May 13, 2021			
Date of report issued:	May 14, 2021			
Test Result :	PASS *			

*In the configuration tested, the EUT complied with the standards specified above

The CE mark as shown below can be used, under the responsibility of the manufacturer, after completion of an EU Declaration of Conformity and compliance with all relevant EU Directives.

5 General Information

5.1 Client Information

Applicant:	BRAYTRON S.R.L.
Address of Applicant:	B.DUL IULIU MANIU, NR.616, CORP B, ETAJ 1 SECTOR 6, 061129, BUCHAREST, ROMANIA
Manufacturer:	DEMGRUP INTERNATIONAL LIGHTING LIMITED
Address of Manufactur	er: UNIT D 16/F, ONE CAPITAL PLACE, 18 LUARD ROAD, WAN CHAI, HONG KONG

5.2 General Description of E.U.T

Product Name:	LED OUTDOOR LIGHTING FIXTURE
Brand Name:	Braytron
Model No.:	Please Refer To Page 5.
Test Model No.:	BT42-89632
Power Supply:	AC220-240V, 50/60Hz, 200W

5.3 Test mode

On mode Keep the EUT lighting	E /	Description of Suppo	rt Unito
		On mode	Keep the EUT lighting

5.4 Description of Support Units

None.

5.5 Deviation from Standards

None.

5.6 Abnormalities from Standard Conditions

None.

5.7 Monitoring of EUT for All Immunity Test

Visual:	Monitor the lighting of EUT
Audio:	N/A

6 Test Instruments List

7.2 Radiated Emissions (30MHz-1000MHz)

Test Requirement:	EN IEC 55015				
Test Method:	EN IEC 55015				
Test Frequency Range:	30MHz to 1000MHz				
Measurement Distance:	3m				
Limit:	Frequency range(MHz)	Limit (dBuV/m)			
	30 to 230	40.00			
	230 to 1000	47.00			
Test setup:					
Test procedure	 chamber. 2. The tabletop EUT was placed the ground reference plane. <i>I</i> EUT was placed on the horiz separated from metallic contains the form metallic contains the f	was conducted in a semi-anechoic d upon a non-metallic table 0.8m above And for floor-standing arrangement, the ontal ground reference plane, but act with the ground reference plane by			
		f radiated emissions, a pre-scan was ode with the peak detector to find out ctrum plots of the EUT.			
	 The frequencies of maximum emission were determined in the final radiated emissions measurement. At each frequency, the EUT was rotated 360°, and the antenna was raised and lowered from 1 to 4 meters in order to determine the maximum disturbance. Measurements were performed for both horizontal and vertical antenna polarization. 				
Test Instruments:	Temp.: 25 °C Humid.: 50% Press.: 1012mbar				
Measurement Record:		Uncertainty: ± 4.50dB			
Test Instruments:	Refer to section 6 for details				
Test mode:	Refer to section 5.3 for details.				
Test results:	Pass

8 Immunity Test Results

8.1 Performance Criteria Description of EN 61547

Criterion A:	During the test no change of the luminous intensity shall be observed and the regulating control, if any, shall operate during the test as intended.
Criterion B:	During the test the luminous intensity may change to any value. After the test the luminous intensity shall be restored to its initial value within 1 min.
	Regulating controls need not function during the test, but after the test the mode of the control shall be the same as before the test provided that during the test no mode changing commands were given.
Criterion C:	During and after the test any change of the luminous intensity is allowed and the lamp(s) may be extinguished. After the test, within 30 min, all functions shall return to normal if necessary by temporary interruption of the mains supply and/or operating the regulating control.

8.3 Radiated Immunity

Test Requirement:	EN 61547
Test Method:	EN 61000-4-3
Frequency range:	80MHz to 1GHz
Test Level:	3V/m
Modulation:	80%, 1kHz Amplitude Modulation
Performance Criterion:	A
Test setup:	Alterna Alterna Alterna Alterna Alterna Alterna Alterna Alterna Alterna Alterna Alterna Ground Reference Plane Sonid Generofor Angelor
Test Procedure:	 For table-top equipment, the EUT was placed in the chamber on a non-conductive table 0.8m high. For arrangement of floor-standing equipment, the EUT was mounted on a non-conductive support 0.1m above the supporting plane. For human body-mounted equipment, the EUT may be tested in the same manner as table top items. If possible, a minimum of 1 m of cable is exposed to the electromagnetic field. Excess length of cables interconnecting units of the EUT shall be bundled low-inductively in the approximate center of the cable to form a bundle 30 cm to 40 cm in length.
	 The EUT was initially placed with one face coincident with the calibration plane. The EUT face being illuminated was contained within the UFA (Uniform Field Area).
	4. The frequency ranges to be considered were swept with the signal modulated and pausing to adjust the RF signal level or to switch oscillators and antennas as necessary. Where the frequency range was swept incrementally, the step size was not exceed 1 % of the preceding frequency value.
	5. The dwell time of the amplitude modulated carrier at each frequency was not be less than the time necessary for the EUT to be exercised and to respond, and was not less than 0,5 s.
	6. The test normally was performed with the generating antenna facing

Page 25 of 35

	each side of the EUT				
	7. The polarization of the field generated by each antenna necessitates testing each selected side twice, once with the antenna positioned vertically and again with the antenna positioned horizontally.				
	8. The EUT was performed in a configuration to actual installation conditions, a video camera and/or a audio monitor were used to monitor the performance of the EUT.				
Test environment:	Temp.: 25 °C Humid.: 52% Press.: 1012mbar
